Follow Up Flag: Follow up
Flag Status: Completed

Also, the “wash tanks” are different tanks (not the concrete lined sump/vault) and they are actual bolted steel tanks.

Sally,

In our discussion earlier, you noted that the temporary holding “wash tanks” were concrete lined features. Can you please provide more details on these features such as if they are above ground, lined excavations, etc.?

Thank you,

Josh

Hello Josh,

Attached you will find the requested letter. However, please re-evaluate whether or not your request even pertains to the Anterra wells. It's in my very strong opinion that the request in the Dec 18th letter does NOT pertain to the Anterra wells because of how we manage our oil/produced water mixture. If by chance, upon review of my letter you do believe we are still required to submit the information requested in the Technical Reports, then please consider my request for an extension. Thank you for your consideration in this matter.

Importance: High

Hi Sally,

Thank you for the email. Please resend this request on letterhead as an attachment and I will have it reviewed by our executives. In the letter please provide an estimate of the number of sumps ponds or pits operated by Anterra.

Thank you,

Josh

Subject: Technical Report Request for Extension

Good Morning Josh,

The purpose of this email is to formally requests an extension for the submittal of the Technical Report requested in the December 18th letter, signed by Paula Rasmussen.

As discussed, you are requesting a very significant amount of data and if I am going to prepare an accurate and comprehensive report as you are requesting, I do not believe that I can possibly provide this to you by January 18th. I have already contacted our environmental consulting firm, Sespe and have them starting on the maps are aerial you are requesting, with labels for various site features. They tell me they will "try" to get this done within two weeks. I have talked with Jeff Dorrington of the Ventura County Watershed Protection District and he will be identifying well locations within a one mile radius of our facility and providing any water quality data that he has associated with these wells. I have also called the City of Oxnard and am trying to get in touch with someone from their Water Department who will be able to provide me with similar date to what Jeff Dorrington is providing. Today I will be contacting the County of LA to try to gather similar data for our Tapia well in Castaic.

My analytical lab cannot come out to our sites until next week and once they sample, their turn-around time on analyticals will be two to three weeks.

Therefore, I respectfully request that you allow Anterra Energy Services and Anterra Services to submit these Technical Reports to you by January 29th.

Thank you for your consideration in this matter. Please call or email me if you have any questions.
